

Welcome to Hokkaido!

Enjoy your visit without traffic accidents and violations.

Between July and September, many traffic accidents occur in the suburbs, such as **accidents involving one car** due to speeding or inappropriate steering, or **head-on collisions** due to inattentive driving. July has the **most fatal accidents** involving **motorcyclists**.

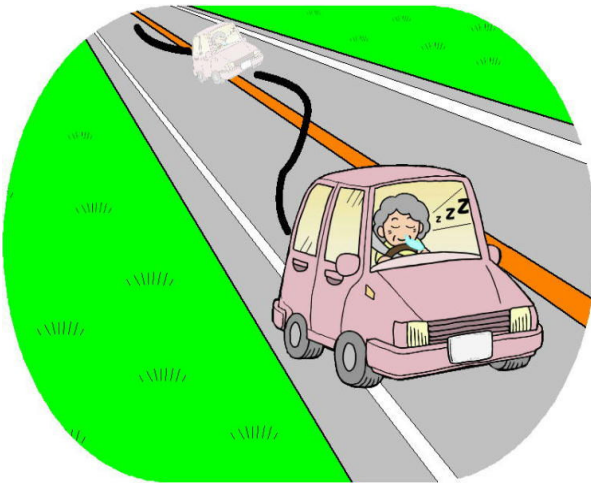

Slow down while driving!

Many fatal accidents occur in Hokkaido because drivers are tempted to speed by the wide and straight roads. Prevent traffic accidents by planning for a safe and relaxing journey.

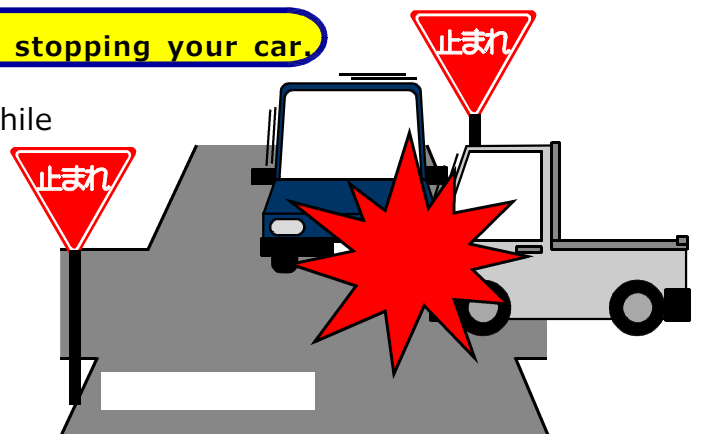

Beware of dozing off and inattentive driving!

When you are driving along a straight road with light traffic, you tend to continue looking at one place. If you don't move your eyes, your attentiveness will deteriorate, which can lead to dozing off or inattentive driving. Try to prevent inattentive driving, for example by looking in different directions to move your eyes.

Check your car navigation system after stopping your car.

Some drivers fail to observe road signs while watching the display of their car navigation system and cause a serious traffic accident. It is very dangerous to look aside while driving. Before checking your car navigation system to find your way, stop your car at a safe place.

Prevent fatal traffic accidents. ~Make Hokkaido an accident-free prefecture.~
